

BALL & SPOON COUPLING SYSTEM

The DROMONE Ball & Spoon Coupling System offers you the quietest towing experience when compared to conventional hook and ring systems.

90% less wear and hitch damage compared to using traditional towing rings, reducing your operating costs.

Fully Automatic Coupling

The DROMONE Ball & Spoon Coupling System allows for fully automatic coupling from the cab of the tractor with no need to leave the cab during coupling/uncoupling.

Safest Coupling System

Eliminates the risk of worn tow rings escaping from under the keeper plate, giving peace of mind.

Certified and conforms to ISO 24347.

Quietest Towing Experience

The DROMONE Ball & Spoon eliminates shunting and rattling noises, offering you the quietest towing experience.

Maximum Flexibility

DROMONE's Ball & Spoon system is the easiest to use locking keeper plate in the market.

The system is automatic and interchangeable with hook and drawbar.

No hitch modifications required, and no upward movement when tipping trailers.

Reduced Wear

90% less wear and hitch damage compared to using traditional towing rings, reducing your overall operating costs.

The DROMONE Ball & Spoon is a coupling system with a defined greasing point that evenly distributes the grease over the coupling, further reducing wear on the system.

Easy and accessible grease points for easy maintenance.
